***Video Conferencing, Streaming,
Recording, and Surveillance with
Guaranteed Quality-of-Service***

Internet Video Made Easy

Internet-based video (IP video) is a great way to leverage your current investment in broadband and networking. And videoNEXT makes it easy to implement IP video applications on your current network using your existing high-speed Internet connection. Our complete solutions support all existing videoconferencing systems and hardware, so you can expand your video capabilities to every workstation on your network.

The videoNEXT NEXTcam videoPBX adds the following capabilities to your network:

- **Video Conferencing**
- **Video Surveillance**
- **Video Streaming**
- **Video Archiving & Replay**
- **Video Broadcasting**

To get the best possible quality of service, your NEXTcam videoPBX connects to the videoNEXT Gateway, which interfaces with other video systems, prioritizes audio and video streams, and provides additional services. Get videoNEXT today—our single-source, open solutions are the easy way add a full range of video applications without adding a lot of hardware.

Leveraging Your Broadband Investment

VideoNEXT makes it easy to add a complete suite of Internet video applications to your network using your existing broadband connection. Our comprehensive yet simple solutions let you tap into an entire new world of Internet functionality. Imagine every computer on your network having access to video conferencing, video surveillance, video streaming, video archiving and replay, and video broadcasting!

System Compatibility

With our easy out-of-the-box solutions, "plug and play" hardware, and full technical support, you will be up and running in no time. Used in tandem, the videoNEXT Gateway and NEXTcam videoPBX support all types of current and legacy videoconference systems, including ISDN systems, desktop systems, set top systems, NetMeeting®, CUSeeMe®, Webcams, and surveillance cameras, so you'll be able to talk with customers and vendors, no matter what system they're using. Our solutions were created using open standards, so you can use any existing hardware you may already have, including peripherals from Polycom, Sony, Real Networks, and Cisco, and other leading manufacturers.

Video Portal

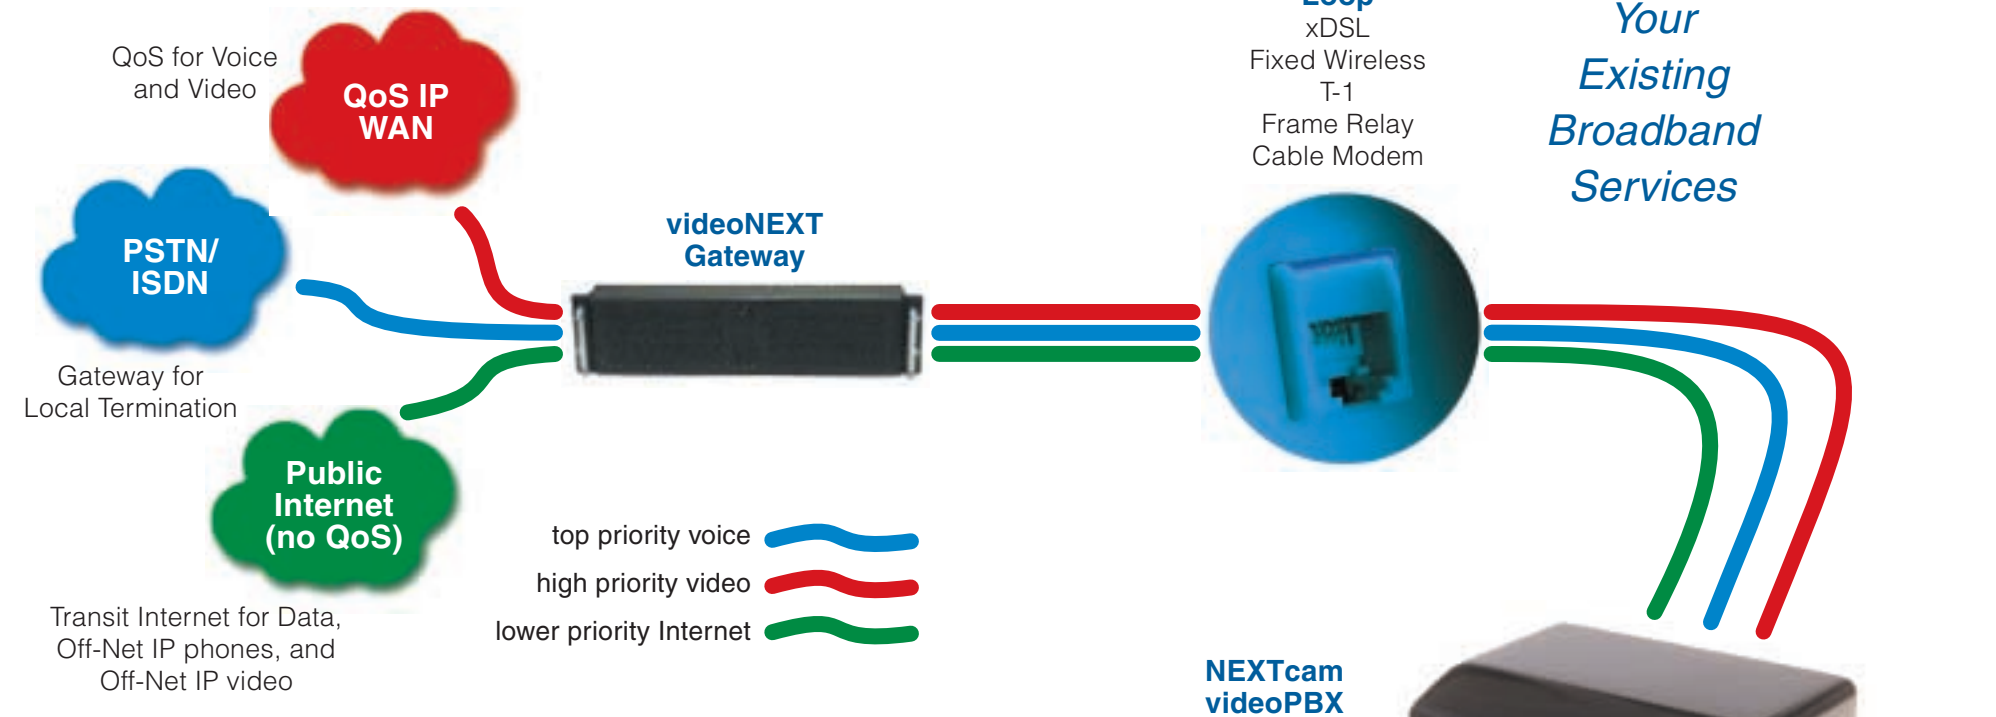

Both the videoNEXT Gateway and the NEXTcam videoPBX are built on Linux and use Web-based control panels to improve reliability and minimize support costs. Along with the core video conferencing, streaming, and recording applications, the appliances have built-in video portal software for organizing your video users, webcams, surveillance cams, recorded content, and broadcasts.

These tools minimize the need for ongoing system management and support, thereby reducing the appliances's lifetime cost of ownership and improving the return on your investment in video.

Video-Optimized IP Network Service

Guaranteed Quality of Service (QoS)

You're in Control

As illustrated above, a videoNEXT Gateway attaches to the network at either your current ISP or at the videoNEXT office. The Gateway prioritizes network traffic to and from the NEXTcam videoPBX at your site. The NEXTcam videoPBX performs a similar function on your network, prioritizing voice and video traffic from various devices on your intranet such as Webcams, conference systems, and IP phones. The Web-based Video Desktop interface makes it easy to set up and control video services from anywhere. The system can be configured to accommodate any number of users and makes deploying new services as easy as clicking a button, so you can instantly add new users or applications to fit your needs.

Get a complete IP video solution from videoNEXT! Enhance your existing network and broadband services with videoNEXT's guaranteed quality-of-service, ease-of-use, and full range of video applications. Call toll free **(877) 843-3677** or email us at info@videonext.com today and learn how you can get the best possible video services across your broadband network.
